Power in Parallel

An open source, public, decentralised ledger.
Built to provide unlimited scale.

[Get Tokens](#)

A safe place for the world's wealth.

The World Economic Forum predicts that by 2027, 10% of Global GDP will be stored on public blockchain.

But today, public blockchain is unable to support even 1% of the world's daily transaction volume.

We thought it was time to start building an open-source, decentralised public ledger capable of making that prediction a reality.

[Get Tokens](#)

An open network for everyone.

We know that for a public ledger to truly be global and successful it can't be a black box built behind closed doors.

This is why we are committed to ensuring full public control of the network and have already open-sourced our code, sharing updates as they are developed along the way.

It's not just about the code; we want anyone to get involved, whether it's feeding back on governance or creating GIFs.

We can't succeed without you.

Get involved.

Practice makes perfect

Radix's journey started back in 2013 when our founder, Dan, saw both the promise and challenges of Bitcoin. For Bitcoin or any cryptocurrency, to become a new global cash system Dan knew it needed to be able to scale to meet global demand.

Over the last 8 years, we have been researching, testing and iterating on new technologies to solve this approach. Read more about the Radix journey and how we got to the answer, Cerberus, [here](#).

Dan Hughes

Dan founded Radix after developing and selling IP now found in key mobile NFC payment technology. He also designed and co-built T-Mobile's 1st mobile internet platform.

Piers Ridyard
CEO

A Y Combinator Alumni, Piers joined Radix after exiting his previous company which built DLT based deal rooms for clearing syndicated insurance contracts.

Albert Castellana

CPO

[See the whole team](#)

Founding Council Member of NEM (\$18Bn peak market cap) giving him experience and insights to running a public ledger few else in the industry can match.

Key Features

Censorship Resistant

No one can stop it.

Decentralised

No one controls it.

Permissionless

Anyone can use it.

Fast

Sub 5 second finality.

The Future of Money

CITIA.M.

“

Cerberus represents a new generation of consensus protocols, designed and built around a highly sharded data structure enabling unprecedented levels of scale for a distributed ledger. We are excited to be testing Cerberus as part of our work at ExpoLab and see how it performs in real-world environments.
