Experimental Setting

Hardware:

 \blacksquare (2 \times 8-core) Intel(R) Xeon(R) CPU E7-4820 @ 2.00GHz, 32GB, 2 \times HDD, SSD Fusion-io

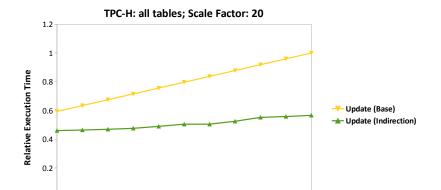

Software:

- Database: IBM DB2 9 7
- Prototyped in a commercial proprietary database
- Prototyped in Apache Spark by UC Berkeley
- LIBGist v.1.0: Generalized Search Tree C++ Library by UC Berkeley (5K LOC)
 (Predecessor of Generalized Search Tree (GiST) access method for PostgreSQL)
- LIBGist^{mv} Prototype: Multi-version Generalized Search Tree C++ Library over LIBGist supporting Indirection/LIDBlock/DeltaBlock (3K LOC)

Data:

- TPC-H benchmark
- Microsoft Hekaton micro benchmark

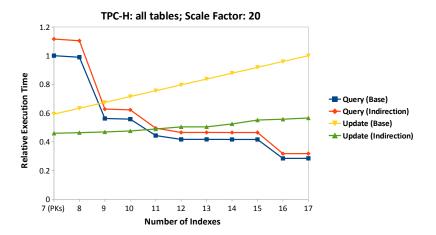

Substantially improving the update time ...

Number of Indexes

7 (PKs) 8 9 10 11 12 13 14 15 16 17

... Consequently affording more indexes and significantly reducing the query time

Generalized Concurrency Control: Volume Dimension

Observed Trends

Indirection

In operational multi-version databases, there is a tremendous opportunity to avoid clashes between readers (scanning a large volume of data) and writers (frequent updates).

Introducing a (latch-free) two-version concurrency control (2VCC) by extending indirection mapping (i.e., central coordination mechanism) and exploiting existing two-phase locking (2PL) in order to Decouple Readers/Writers to Reduce Contention (Pessimistic and Optimistic Concurrency Control Coexistence)

Recap: Indirection technique for reducing index maintenance

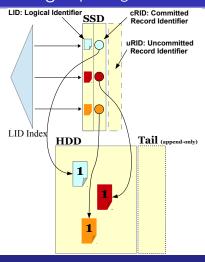

Extending the indirection to committed/uncommitted records

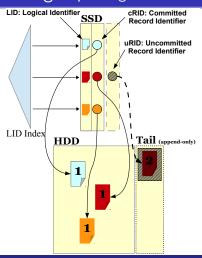

Indirection

Extending the indirection to committed/uncommitted records

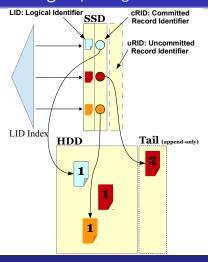

Decoupling readers/writers to eliminate contention

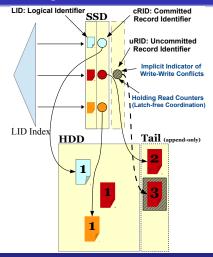

2VCC

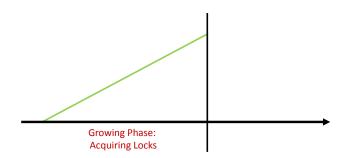

Decoupling readers/writers to eliminate contention

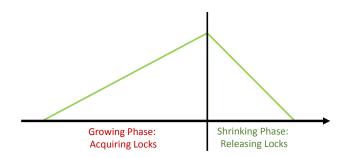

Decoupling readers/writers to eliminate contention

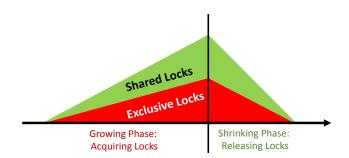

Two-phase locking (2PL) consisting of growing and shrinking phases

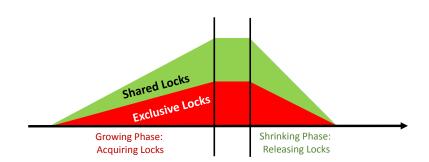

Two-phase locking (2PL) consisting of growing and shrinking phases

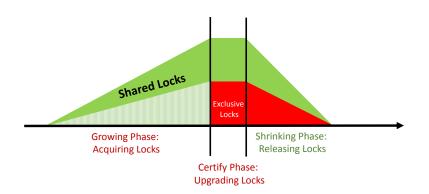

Two-phase locking (2PL) consisting of growing and shrinking phases

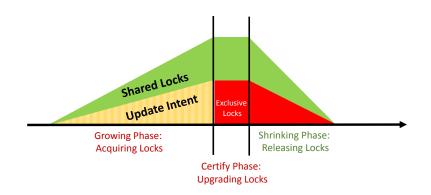

Extending 2PL with certify phase

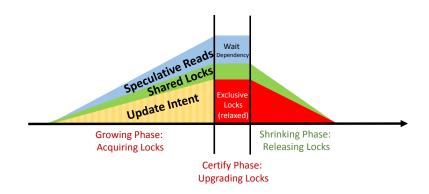

Exclusive locks held for shorter period (inherently optimistic)

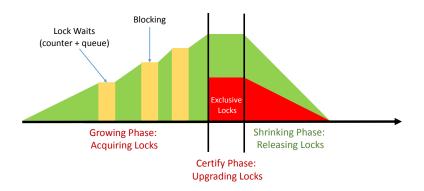

Exclusive locks held for shorter period (inherently optimistic)

Relaxed exclusive locks to allow speculative reads (increased optimism)

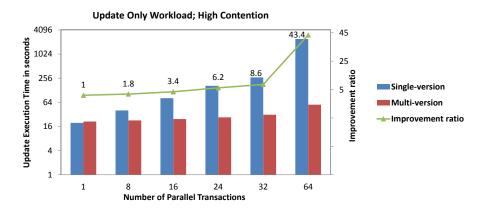

Trade-offs between blocking (i.e., locks) vs. non-blocking (i.e., read counters)

Experimental Analysis

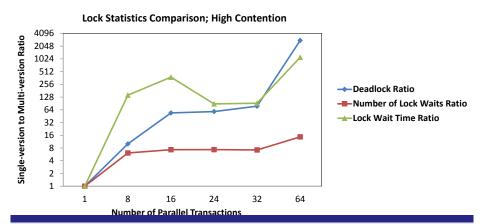

2VCC: Effect of Parallel Update Transactions

Substantial gain by reducing the read/write contention & using non-blocking operations

2VCC: Effect of Parallel Update Transactions

Substantial gain by reducing the read/write contention & using non-blocking operations
